The information input into MRP systems comes from three main sources: a bill of materials, a master schedule, and an inventory records file. GM suppliers are now pressing for long-term contracts, so the company is trying to reduce the number of suppliers from the 3, it now uses. Changing the dynamics of the problem leads to a multi-item analogue of the dynamic lot-size MRP1 versus JIT.

In addition, the system constantly attempts to reduce lead times, work-in-progress. Chapter 7: Musical Inventories. The factory receives its plastic body panels five times each day from the Budd Company, located miles away in Ohio. OPT tolerates minor disturbances and requires moderate discipline and limited data accuracy. Kanban assumes that the production rate at the final assembly line is. Material requirements planning MRP is a computer-based inventory management system designed to assist production managers in scheduling and placing orders for items of dependent demand.
