Let us know what you think Algorithmia or by email. Black is not a color; a black object absorbs all the colors of the visible spectrum and reflects none of them to the eyes. It is as much as a scientific problem as artistic one. They can highlight or remove something to extract information out of the picture. Examples of textures that work well for black and white photos are wood, metals and stone, even plants and human skin. We use the images from our folder, Xtrain, to generate images based on the settings. I proceeded with my own interpretation in Keras. It only values the information, but not the layout of an image. Introduction: Creative Cloud Plans includes Lightroom and other super helpful software. To understand the weakness of the alpha version, try coloring an image it has not been trained on.
